suares.mark@epa.gov [4:30 PM]:

Hopefully this is helpful, it's from the 2007 Aldicarb RED (p. 25/119), "Due to the nature of how aldicarb is applied to citrus (2 inches in depth), the Agency has assumed that 85% of the aldicarb applied is covered with soil, and that 15% may remain on the surface for potential terrestrial organism exposure."
